MEMORANDUM FOR MR. BRYCE

Attached is a booklet with a rather lurid title which is nevertheless a highly intelligent and interesting document which we think you would be interested to read. You will see from the list of members of the sponsoring council on the first page that some very high priced help has contributed to it.

The booklet contains a number of inaccuracies and completely ignores the whole problem of the protection of sources which is in some sense the heart of our problem. Nevertheless, it has a very fresh and sincere approach, and it is this which makes it worth reading.

Do you think it might be a good idea for us to distribute it, at least to all members of the Security Panel and Sub-Panel with a view to stimulating thought and discussion?

P.M.S.
